**TEAM SEEDS**®

**T**eam Seeds was founded in 2010, has been committed to the introduction research and development, the promotion of high trait high quality vegetable seeds work. We deeply understand every seed sown in earth contains ardent hope for both farmers and ours. To provide reliable quality, excellent varieties, excellent benefits of good vegetable seeds is our constant goal.

Our business philosophy is product, innovation and Research & Development, quality control of the production process, professional term service with our abundant experience. With this we provide our customers high quality hybrid seeds along with reliable service.

We have more than 50 staff members engaged in Scientific, Research, Production, Sales & Office. Our varieties of high production resistant to disease and high environmental adaptability quality that will complete all your requirements. We believe our high quality varieties will be of almost use.

To supply the seeds that is trusted by farmers and preferred by consumers. Team Seeds Pvt. Ltd. do the best one can.

"We thank you for your kind interest efforts and contribution."

LONG YARD BEANS

## TS-18 (IMP)

Colour dark green. Length 14-20 inches with tender pods. Maturity in 55-60 days after sowing red seed.

BEANS

## SHAGUN

Colour dark green, Length 13-15 cms. Cylindrical smooth skin pods. Bushy type plant. Maturity after 40-45 days.

BEANS

## JUHI (IMP.)

A pole bean, medium green colour, length 16-22 cms. (approx). Early maturity & high yield potential.

BEET ROOT (IMPORTED)

## LALI

Detroit type variety, large round roots and very strong foliage, excellent internal quality.

F1 HYBRID BEET ROOT

## GLORY

Large round roots. Red without white concentric rings, smooth without root hairs, good field holding capacity.

**BHINDI**

## **RUCHI**

Fruits have dark green colour, short inter-nodes, high tolerance to YVMV disease and high yielder.

**F1 HYBRID BHINDI**

## **SAPNA-21**

First harvesting in 45-50 days after sowing. Dark green fruits with ridges, tolerant to YVMV diseases.

F1 HYBRID BHINDI

## ANMOL

Plants are excellent, green in colour & medium tall variety. First picking starts in 42-48 days after sowing. High tolerant to YVMV disease.

F1 HYBRID BHINDI

## DIVYA

Plants are medium tall, excellent & dark green in colour. First picking starts in 40-45 days after sowing. High tolerance to YVMV.

F1 HYBRID BHINDI

## POONAM

Vigorous plants. Fruits are glossy. Dark green in colour. First picking starts in 45-47 days after sowing. Tolerant to YVMV, suitable for all okra growing area.

Ahead of Times.....

**TEAM SEEDS**

**BITTER GOURD**

## **SAMRAT KATAHI**

Picking starts after 60-65 days, fruit length 14-18 cms. weight approx 70-80 gms with strong spines.

**F1 HYBRID BITTER GOURD**

## **APOORVA**

Picking starts in 40-42 days, fruits are oval shaped 8-9 cms long, diameter 4 cms, dark green colour, glossy with medium strong spines. Vines vigorous and prolific.

**F1 HYBRID BITTER GOURD**

## **VIR**

Picking starts in 50-55 days. Fruits length 23-28 cms. Weight approx 115-130 gms. Dark green colour in dentate.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID BITTER GOURD

## RAZIA

Early maturity, fruits length 21-24 cms. Attractive, shiny, dark green fruits, good for transportation and heavy yield with prolific.

F1 HYBRID BITTER GOURD

## SANCHI

Picking starts after 45-50 days. Vigorous plant with high yield. Fruits are 12-15 cms long. Fruits are spineless with attractive green colour.

F1 HYBRID BITTER GOURD

## PALAK

Picking starts after 52-58 days. Fruits length 26-30 cms. Weight approx. 110-130 gms. Attractive green colour with heavy bearing.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID BOTTLE GOURD

## VANI

Harvesting in 52-58 days. Fruits are cylindrical straight type with attractive green colour. Fruit length 45-60 cms. & high yield potential.

F1 HYBRID BOTTLE GOURD

## SANDHYA

Fruits are cylindrical gutka type. Fruit length 30-40 cm. High yielder.

F1 HYBRID BOTTLE GOURD

## ABHIMANYU

Vigorous vines with high fruit setting. Long and cylindrical, 40 - 45 cm. length, attractive dark green colour with blotched ring pattern on fruit surface. Maturity 50-55 days after sowing, high yield and uniform size fruits.

Ahead of Times.....

**TEAM SEEDS**

#### BOTTLE GOURD

### MOTI

Harvesting in 50-55 days. Fruits are oval round in shape, weight approx. 0.7-1.0 kg.

#### F1 HYBRID BOTTLE GOURD

### KOMAL

Harvesting in 50-55 days. Fruits are oval round in shape, light green in colour. Weight approx. 1-1.5 kgs.

#### F1 HYBRID BOTTLE GOURD

### LADDU

Harvesting in 48-52 days. Fruits are in oval round shape with little neck, weight approx. 0.9-1.0 kgs. Early prolific and continuous bearing.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID BOTTLE GOURD

## PARAS

Maturity in 45 to 55 days.  
Fruits are oval round in  
shape, light green in colour.  
Weight approx 1.5-2.0 kg.

F1 HYBRID BOTTLE GOURD

## UDDIT

Harvesting in 50-55 days.  
Fruits are flattish round in  
shape. weight approx.  
0.7-1.0 kg.

F1 HYBRID BRINJAL

## KIRAN

Fruits are in round shape. Harvesting starts in 52-58 days after trans-planting. Fruit weight approx 250-300 gms. & has dark purple colour.

F1 HYBRID BRINJAL

## PPL-77

Fruits are thin long, colour shiny dark purple. Harvesting starts in 52-58 days after transplanting. Fruit weight approx. 95-110 gms.

F1 HYBRID BRINJAL

## TS-504

Fruits are Medium long & pinkish in colour. Harvesting starts in 58-65 days after transplanting. Fruit weight approx. 100-125 gms.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID BRINJAL

## GREEN LONG

Fruits are long & green in colour. Harvesting starts in 50-60 days after transplanting. Fruit weight approx 100-110 gms.

F1 HYBRID BRINJAL

## PK-331

Fruits are cylindrical long. Colour shiny dark purple. Harvesting starts in 52-58 days after transplanting. Fruit weight approx. 100-110 gms.

F1 HYBRID BRINJAL

## PRIYA (CHU-CHU)

Fruits are small egg-shaped, with shiny purple colour. Harvesting starts in 45-48 days after transplanting. Fruits weight approx. 50-60 gms.

F1 HYBRID BRINJAL

## KESHAV

Fruit is egg shaped & dark blackish colour. Harvesting start in 50-56 days after transplanting. Fruit weight approx. 200-300 gms.

F1 HYBRID BRINJAL

## KARAN

Fruits are in egg shaped. Blackish shiny colour. Harvesting starts in 54-58 after transplanting. Fruit weight approx. 125-150 gms.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID BRINJAL

## HARITA

Fruits are beautiful green, oblong round with slight whitish streaks. Harvest in 55-65 days after transplanting. Fruit weight approx 110-200 gms.

F1 HYBRID BRINJAL

## WHITE LONG

Fruits are medium long, white in colour. Harvesting starts in 45-55 days after transplanting. Fruit weight approx 90-110 gms.

F1 HYBRID BRINJAL

## ISHA

Fruits are in oval shape & white in colour. Harvesting in 55-65 days after transplanting. Fruit weight approx. 60-70 gms.

F1 HYBRID BRINJAL

## BLACK LONG

Fruits are long & blackish dark in colour. Harvesting starts in 55-60 days after transplanting. Fruit weight approx 100-150 gms.

CABBAGE

## GOLDEN ACRE (IMP)

Early maturity, round head shape, Approx wt. 1.0 to 2.0 kg.

F1 HYBRID CABBAGE

## PALLAVI

Extremely firm head. Maturity in 55-60 days. Head Wt. 1.0-1.5 kgs. Deep green colour, globe & very tight with excellent field holding capacity.

**CAPSICUM**

## **DEEPIKA (IMP)**

Maturity in 50-60 days after trans-planting. Fruits are dark green, blocky shaped, 10-11 cms long, 3-4 lobes. Average fruit weight 125-150 gms.

**F1 HYBRID CAPSICUM**

## **KAANTI**

Early maturity. Fruits are deep green, blocky shaped long self like, strong disease resistance, Suitable for both open and poly house, 10-12 cms long and 11-12 cm. in diameter & thick walls.

**F1 HYBRID CAPSICUM**

## **SHEZADI**

Medium early maturity, tall plant and dark green leaves. Very strong disease resistance and good fruit setting quality, deep green colour, blocky shaped, thick wall fruits, good for transportation, long shelf life and high yielder.

Ahead of Times.....

**TEAM SEEDS**

## CARROT

### RANI

Maturity in 80-90 days.  
Length 25-30 cms.  
Attractive red colour and  
very thin core.

## F1 HYBRID CARROT

### MAHARANI

Maturity in 70-75 days after  
sowing. Root length 30-35  
cms. Weight 200-250 gms.  
Very small, self core & deep  
red colour.

CARROT

## EARLY RITU (IMP)

Maturity in 90-100 days after sowing. Root length is 15-18 cms. Weight approx 170-200 gms. with orange colour.

F1 HYBRID CARROT

## EARLY BASANTI

Maturity in 85-90 days, deep orange and self coloured core. Early and high yielder, excellent transportability and shelf life.

F1 HYBRID CAULIFLOWER

## ARCHANA

Sowing time Early to Mid season.  
Curd weight approx. 0.8 to 1.2 kg.

F1 HYBRID CAULIFLOWER

## MUSKAN

Sowing in early season.  
Weight 0.8 to 1.2 kg. (Approx)

F1 HYBRID CAULIFLOWER

## EARLY GOLD

Sowing time May to June.  
Curd weight approx. 0.350 to 0.500 gms.

Ahead of Times.....

**TEAM SEEDS**

CAULIFLOWER

## SUMMER CROSS

Sowing time May to June.  
Curd weight 0.350 to 0.500 gms

F1 HYBRID CAULIFLOWER

## LUXMI

Sowing time 15 May to 15 July.  
Curd weight 0.700 to 0.900 gm.

CAULIFLOWER

## SPL. FIRST CROP

Sowing time 15 May to 15 July.  
Curd weight 0.700 to 0.900 gm.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID CAULIFLOWER

## EARLY WHITE

Sowing time 15 May to July.  
Curd weight approx. 0.8 to 1.0 kg

CAULIFLOWER

## RAJKUMARI

Sowing time 15 May to 15 July.  
Curd weight 0.700 to 0.900 gm.

CAULIFLOWER

## FIVE STAR

Sowing time May to July.  
Curd weight 0.5 to 1.00 kg

Ahead of Times.....

**TEAM SEEDS**

CAULIFLOWER

## KANGANA

Sowing time July to 10 August  
Curd weight 0.8 to 1.2 kg.

F1 HYBRID CAULIFLOWER

## RUPALI

Northern Area : 15 June to July  
Western Area : June to August  
Eastern Area : 15 June to August  
Southern Area : June to August  
Curd Weight 0.9 to 1.3 kg.

F1 HYBRID CAULIFLOWER

## GAURI

Sowing time 1 July to 10 Aug.  
Curd weight 0.8 to 1.0 kg

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID CAULIFLOWER

## CHANDANI

Sowing time 10 July to 10 Aug.  
Curd weight 0.9 to 1.1 kg

F1 HYBRID CAULIFLOWER

## SHEETAL

Sowing time Aug. to 15 Sep.  
Maturity in 60-65 days. Curd weight 1-1.25 kg

CAULIFLOWER

## AARTI

Sowing time Aug. to Sept.  
Curd weight 1.2 to 1.5 kg.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID CAULIFLOWER

## SAKSHI

Sowing time from 1 Aug. to 15 Sept. Curd weight 1.0 to 1.2 kg.

F1 HYBRID CAULIFLOWER

## WHITE FLOWER

Sowing time Aug. to Nov.  
Curd weight 1.0 to 1.2 kg.

CAULIFLOWER

## KARINA

Sowing time Sept. to Oct.  
Curd weight 1.25 to 1.75 kg.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID CAULIFLOWER

## KANAK

Sowing time  
15 August to October  
Curd weight 1.2 to 1.8 kg.

F1 HYBRID CAULIFLOWER

## NEHA

Sowing time  
15 Aug. to 15 Nov.  
Curd weight 1.0 to 1.5 kg.

F1 HYBRID CAULIFLOWER

## ANAARKALI

Sowing time from Nov. to Dec.  
Curd weight approx. 1 to 1.25 kg.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID CHILLI

## TS-0017

Maturity in 72-75 days after trans-planting. Length 8-9 cms. Diameter 0.8-1.1 cms. Light green colour with very high pungency.

F1 HYBRID CHILLI

## TARA

Maturity in 55-60 day after transplanting. Length 15-16 cms. Diameter 1.0-1.2 cms, pale green colour and high pungent.

F1 HYBRID CHILLI

## RAGINI

Medium maturity with length 14-16 cms and diameter 1.2 cms(approx) with yellowish green colour.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID CHILLI

## GHOOMAR-2 (NEW)

Medium maturity with length 18-19 cms, diameter 2.8-3.0 cms. Green colour, medium pungency with high temperature resistance & good fruit setting.

F1 HYBRID CHILLI

## TIKHI (44)

Maturity in 52-55 days after transplanting. Length 8-10 cms. diameter 0.5 - 0.8 cms. Dark green colour & pungent.

F1 HYBRID CHILLI

## TS-0011

Maturity in 70-75 days after transplanting. Length 8-9 cms and diameter 1.0-1.2 cms. Dark green colour with high pungency.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID CHILLI

## TS-0066

Maturity in 65-75 days after trans-planting. Length 7-8 cms. diameter 0.8-0.9 cm. Dark green colour with dual purpose & suitable for round the year.

F1 HYBRID CHILLI

## SHAKTI

Maturity in 55-60 days after transplanting. Length 14-16 cms. and diameter 1.0-1.2 cms. Dark green colour and pungent.

F1 HYBRID CHILLI

## STAR

Strong hot taste. Fruit size 5-6 cm. diameter 0.1-1.1 cm. Fruit setting 7-14 cluster & strong disease resistance.

Ahead of Times.....

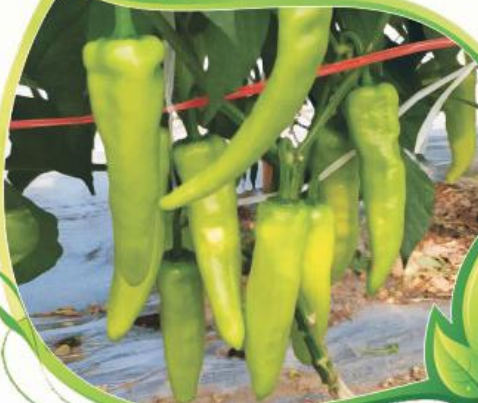

**TEAM SEEDS**

F1 HYBRID CHILLI

## TS-2019

Early Maturity, Fruit size 12-13 cms long & diameter 2.5 - 3.0 cms. Light green colour with high yielder.

F1 HYBRID CHILLI

## KANCHAN

Very attractive & compact fruits. Harvesting in 50-60 days after transplanting and has strong hot taste. Green colour, medium fruit size & good for transportation.

Ahead of Times....

**TEAM SEEDS**®

CUCUMBER

## HEERA

Early maturity (40-45 days), vigorous vines. Fruits are deep green, shiny, crispy with thick flesh, 23-25 cms. long, 4-5 cms. diameter. Weight 180-200 gms.

CUCUMBER

## ARPIT (IMP)

Early maturity (40-42 days), vigorous vines. Fruits are deep green shiny in colour. Length 22-25 cms., diameter 5-6 cms. Weight 170-200 gms. crispy and thick flesh.

CUCUMBER

## BARSATI (SPL.)

Early maturity. Fruits are long and green in colour, length 20-30 cm. and diameter 4-6 cms. Very high yielding variety and good for rainy season.

Ahead of Times.....

**TEAM SEEDS**

CUCUMBER

## MAALI (IMP.)

Fruit shape & colour : Fruit are long is colour green. 20-30 cms. long & 4-6 cms. in diameter. Very high yield variety and good for rainy season.

F1 HYBRID CUCUMBER

## AZAD

Cylindrical shape with thick flesh 18-22 cm. and good taste. Dark green colour will not change to yellow. High disease tolerance and good fruit setting.

F1 HYBRID CUCUMBER

## HIND

Slight dark green shoulder, 18-22 cm. length. Fruit weight 160-200 gm. Harvesting starts in 38-45 days after sowing.

Ahead of Times.....

**TEAM SEEDS**

CUCUMBER

## HARIT PAHARI

Early maturity, fruits are long and green in colour, length 20-30 cms. long and diameter 4-6 cms. Very high yielding variety and good for rainy season.

F1 HYBRID CUCUMBER

## MAHI

Fruits are attractive with cylindrical uniform shape & blunt end. Fruits average length 17-20 cm. free from bitterness & excellent yielder.

F1 HYBRID CUCUMBER

## RIYA

Early hybrid. First picking starts in 40-42 days. Fruits are attractive white with cylindrical shape. Length 15-20 cms. approx. Weight 125-150 cms. (average)

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID CUCUMBER

## KAMINI

First picking in 40-45 days. Fruit length 18-25 cms, 5-6 cms diameter with weight upto 200-300 gms and has green colour.

F1 HYBRID CUCUMBER

## KIMATI (FOREIGN SPL.)

Recommended for open field, plastic, greenhouse and tunnels. Length of fruit is 14-18 cms. weight 160-180 gm. Resistant to powdery mildew and fusarium wilt. Dark green smooth fruits.

LONG MELON

## MONIKA

Fruits are long thick green with strips and spots. Fruits have good flavoured flesh.

F1 HYBRID LONG MELON

## SALONI

Fruit are vigorous, long & thin, fruits has early maturity, light green colour with crisp and good flavoured flesh.

LONG MELON

## SWEETY-22 (IMP)

Fruits are long thick and green with strips and spots. Fruits have good flavoured flesh.

Ahead of Times.....

**TEAM SEEDS**

MUSKMELON

## KAJRI-309

Maturity in 100-110 days. Fruits are in oblong shaped, yellowish green skin on maturity, weight 8-9 kgs. Vigorous prolific vines with good fruit setting.

F1 HYBRID MUSKMELON

## MAHIMA

Maturity in 65-75 days. Fruits are round in shape. Weight approx 600-800 gm. Greenish colour with stripes. Pulp has salmon colour.

F1 HYBRID MUSKMELON

## MAHARAJA

Maturity in 62-70 days. Fruits are oval to round shape. Weight approx. 1.2-1.5 kg. Bright golden yellow colour with netting, sweet and salmon colour pulp.

F1 HYBRID MUSKMELON

## SHAHENSHAH

Maturity : 52-58 days. Fruits are round in shape, weight approx 1.1 kg to 1.5 kg with a small cavity flesh, deep salmon colour & very sweet in taste.

F1 HYBRID MUSKMELON

## YELLOW KING

Medium maturity, round shape, fruit has golden rind and white soft juicy flesh. Weight approx. 1.5 to 2.5 kg.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID PUMPKIN

## SINGHAM

Maturity in 100-110 days, Fruits are in oblong shaped, and yellowish green skin on maturity, weight 8-9 kgs. Vigorous prolific vines with good fruit setting.

F1 HYBRID PUMPKIN

## TS-303

Medium maturity, flattish round with yellow spot on green fruits & fruit weight 2-3 kg.

F1 HYBRID PUMPKIN

## VIJETA

Maturity in 85-95 days, fruit weight 5-7 kg. Fruit skin is mottled green in colour.

F1 HYBRID PUMPKIN

## VINAYAK

Fruiting start in 52-58 days, oval shaped, Multi coloured with mottled green skin. Weight 5-8 kg. Well suited for long shelf life and long distance transportation.

F1 HYBRID PUMPKIN

## KUBER

Fruits are dark green in colour & oval in shape. Fruit weight about 4-7 kg.

Ahead of Times.....

**TEAM SEEDS**

RADISH

## **SONAM** (PALAK PATTA)

Smooth leaf, 20-30 cms. long.  
early maturity, white colour

F1 HYBRID RADISH

## **DULARI** (PALAK PATTA)

Maturity in 32-35 days. Root length 25-30 cms. Colour pure white. Sowing time March to September.

RADISH

## **SUNDRI**

Maturity in 38-42 days. Root length 25-30 cms, white colour.  
Sowing time April to November

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID RADISH

## IVY WHITE

Maturity in 42-55 days. Root length 35-45 cms., pure white colour, sowing time in Aug to November.

F1 HYBRID RADISH

## CLEAR WHITE

Maturity in 45-55 days. Root length 25-30 cms. white colour. Sowing time from Aug. to Nov.

F1 HYBRID RADISH

## TEJASWANI

Maturity 60-65 days, root length 30-40 cms. long white and cylindrical shape with less fiber. Bolting and disease tolerant.

Ahead of Times.....

**TEAM SEEDS**

**RADISH**

## **CHINESE PINK**

Maturity in 35-45 days. Root length 12-15 cms. Pinkish red colour, sowing time June to Oct.

**RADISH**

## **HALF RED**

Maturity in 40-50 days. Root length 25-30 cms. upper portion is pinkish red and lower half portion is white, sowing time 15 May to 15 Oct.

**RADISH**

## **FULL RED**

Maturity in 40-50 days. Root length 24-30 cm. pure red colour, sowing time June to 30 Oct.

F1 HYBRID RIDGE GOURD

## SONIA

Picking starts after 50-52 days. Fruits length 32-38 cms. Weight approx. 225-250 gms. Colour dark green.

F1 HYBRID RIDGE GOURD

## RADHIKA

Picking starts after 45-50 days. Fruits length 28-38 cms. Attractive green colour with high yield.

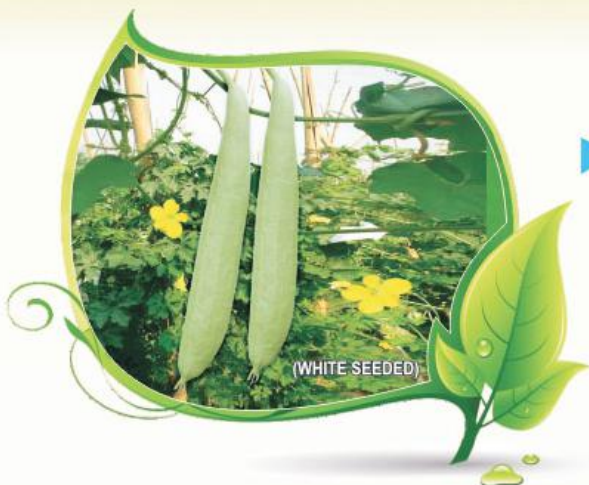

#### SPONGE GOURD RESEARCH

## REKHA

Picking starts in 40-45 days.  
Fruits length 28-30 cms. weight  
approx. 125-130 gms. Colour is  
shiny whitish green.

#### F1 HYBRID SPONGE GOURD

## NISHA

Picking starts in 40-45 days.  
Fruits length 28-30 cms.  
Weight approx. 125-130 gms.,  
shiny whitish green colour.

#### F1 HYBRID SPONGE GOURD

## PYARI

Picking starts in 42-48 days.  
Fruits length 25-30 cms. Weight  
approx. 120-150 gms, shiny  
whitish green colour.

Ahead of Times.....

**TEAM SEEDS**®

F1 HYBRID SPONGE GOURD

## PARTIBHA

Picking starts in 40-50 days after sowing. Fruit length is 14-20 cms. Colour dark green. Average fruit weight 100-150 gms. Very high yielder.

F1 HYBRID SPONGE GOURD

## PREETI

Picking starts in 45-55 days. Fruit length 22-25 cms. Weight approx. 115-130 gms. Colour dark green.

F1 HYBRID SPONGE GOURD

## HIMANI

Dark green colour, long fruits (30-50 cms). The hybrid is vigorous, prolific & continuous bearing with good yield potential.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID SUMMER SQUASH

## JOSH

Early maturity. Fruits are dark green round, vigorous growth of plants, clustered straight and open plant type.

F1 HYBRID SUMMER SQUASH

## SHOBHA

Early maturity, light green color, shining fruits are in round shape, vigorous growth of plants. Good and continuous fruit setting.

TOMATO

## KOHINOOR (IMP.)

Research variety determinate type, Fruits are round and deep red in colour, Fruit weight average 90-110 gms. Good tolerance to diseases bacterial wilt and high yielder.

F1 HYBRID TOMATO

## TS-5025

Plant in determinate type. Fruits are flattish round, red in colour with sour & sweet taste. Weight average 80-90 gms. Tolerant to viruses.

F1 HYBRID TOMATO

## TS 444

Determinate type, Fruits are flattish round, red colour and maturity in 60-65 days after transplanting. Average weight of fruit 80-100 gms. solid and suitable for long transportation, resistance to TLCV

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID TOMATO

## TS-404

Determinate type. Early maturity, flat round. weight 80-100 gms. Tolerant to root knot nematodes, performs well under high temperature.

F1 HYBRID TOMATO

## HIMALYA

Plant indeterminate. Fruit shape round, and deep red colour. Fruits are in bunches. Fruit weight average 85-110 gms., tolerant to diseases.

F1 HYBRID TOMATO

## TS-555

Semi-determinate type. Fruits flattish round with green shoulders, weight average 85-100 gms. Taste sour like desi variety, TLCV tolerant.

F1 HYBRID TOMATO

## TS-4178

Strong plant vigour, semi determinate type. Flattish round fruit with green shoulders. Average Fruit weight 90 to 100 cm, tolerance to TLCV.

F1 HYBRID TOMATO

## ROCK STAR

Determinate, Medium Foilage, Square oval shape, colour uniform red, fruit weight average 85-100 gms.

Ahead of Times.....

**TEAM SEEDS**

F1 HYBRID TOMATO

## TS-404

Determinate type. Early maturity, flat round. weight 80-100 gms. Tolerant to root knot nematodes, performs well under high temperature.

F1 HYBRID TOMATO

## HIMALYA

Plant indeterminate. Fruit shape round, and deep red colour. Fruits are in bunches. Fruit weight average 85-110 gms., tolerant to diseases.

F1 HYBRID TOMATO

## RASHMI

Plant determinate type, early maturity, square round shape, weight 80-100 gms, tolerant to bacterial wilt & TLCV and early blight. Good keeping quality.

F1 HYBRID TOMATO

## SHAAN (IMP)

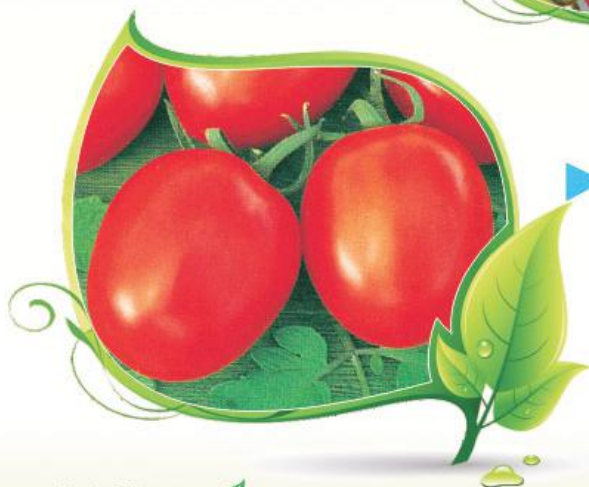

Plant semi-determinate. Fruit harvesting starts in 60-65 days after transplanting, weight 85-100 gms. Tolerance to TLCV. Suitable for long transportation and good setting in high temperature.

F1 HYBRID TOMATO

## TS-111

Semi-determinate type, oval shaped, tolerant to leaf curl virus, harvesting start from 70 days approx. Very firm excellent for transportation.

F1 HYBRID WATERMELON

## AARZOO

Maturity in 70-75 days (ice box type). Fruits are cylindrical oblong with dark blackish skin. Weight 3-3.5 kg. High yielding with very good transportation and keeping quality.

F1 HYBRID WATERMELON

## GOVIND

Ice box type. Fruits are oblong with dark green blackish skin. Weight approximate 2.5 to 3.5 kg. Fruits are attractive, high yielder with good keeping quality and also good for long transportation.

F1 HYBRID WATERMELON

## VARUN
